Mrs.
Prof. Yale Inan
Ehram Yokuşu No. 3

Bebek-Istanbul

Dear Mrs. Inan,

I am working on my thesis for the doctor's degree in Classical Archaeology about the copies of the Aphrodite type Louvre-Naples. As my teacher, Prof. Evamaria Schmidt, advised me, I would like to ask you some questions, concerning replicas from Perge in Antalya Museum. From these statues I would urgently need further informations especially concerning the finding places and their statements for dating the figures.

It concerns the following statues:

1. Statue of a Nemesis (with griffon) from Perge (1985) published Inan, VIII. Kazi Sonuclari Toplantisi II, 1986, 168 Abb. 45.

I would urgently need a better photo of this statue and informations about the finding circumstances, size...

2. Statue of Aphrodite (Antalya Mus. Inv. A 3310) only published by Mellinck, AJA 74, 1970, 167 f. Taf. 44 Fig.20 with a little photo. Are there existing better photos and further information?
3. Aphrodite, Antalya Mus. Inv. A 3313, from Perge. newly published from Özgan, Antalya Mus. (1988) Abb. 103, which is not available till today here in Augsburg or Munich. Is it possible to date this statue after the finding place? Are existing better photos?
4. "Nemesis" from Perge, unpublished? only one Photo DAI Istanbul. It seems that it stood once in the museum

of Antalya, but I couldn't find it there during my visit last year. Do you know something about this figure? I even don't know the provenience, the size, the inv.no ...

I would be very grateful if you could help me a little bit. There are existing so many statues of the Aphrodite-type Louvre-Naples in Turkey, especially in Antalya (From Perge), and it is really difficult for me to distinguish them only using short texts or small figures in the journals.

Thank you very much!
yours sincerely,

Changzhen
